STUDIED AT THE G.D'ANNUNZIO UNIVERSITY - CHIETI/PESCARA - ITALY
SCIENTIFIC TREATMENT OF THE
COMPRESSIVE MICRO-VIBRATION ENDOSPHERES THERAPY

100% NON-INVASIVE - CLINICALLY PROVEN

2 sizes less*

eliminate orange peel skin

-2,5 cm reduction of thighs circumference*

97,8% of cases solved*

more POWER more RESULTS

Endosphères Therapy proven effectiveness has been enriched by the Sensor system, a step ahead in technological innovation: thanks to the inner sensors, it allows the correct pressure to be applied to tissues thereby creating a personalised treatment to meet specific needs - quicker results in less time.

*after only 12 sessions - CF Endosphères Therapy Scientific Studies

1. Acts on Pain Relief

Compressive Microvibration, with its pulsating and rhythmic action on mechanoreceptors, creates a desensitisation of the latter by producing the reduction/removal of pain in a short time. This activation of receptors, together with better oxygenation, allows for the reduction of tissue inflammation. Moreover, the significant pain reduction in the treatment of tissues with cellulite is the result of a net improvement of the metabolism and an important reduction in toxic substances in the body.

2. Acts on Lymphatic Drainage

The rotating action of the Endosphères Therapy, works as a "pump"

What is cellulite

Cellulite (degenerative panniculite oedema sclerotic fibre) is a problem that interests the hyper-derma, a tissue that is beneath the skin and is mainly made of fat tissue.

It's caused by a degeneration of the fat tissue microcirculation, with a consequent alteration of its most important metabolic functions, mainly caused by hormone and vascular characteristics, and aggravated by a sedentary life, stress, bad nutrition and water retention.

Even though it's a characteristic of over weight women, it can also effect slim women, especially on thighs and

hips. Cellulite in the sclerotic phase is insensitive to even the most drastic diets or physical activity.

How can you eliminate it?

The **Compressive Micro-vibration® / Endosphères Therapy®**, is a treatment that allows the reactivation of blood circulation and therefore it improves skin trophism and cellular oxygenation.

The new, revolutionary **Compressive Micro-vibration Endosphères Therapy**, guarantees extraordinary results in only a few sessions.

Areas of Application:
Thighs, Hips, Knees, Buttocks, Belly, Arms,
What conditions does it treat?
Tones Muscles, Back Pain, Neck pain,
Stress Relief, "Sluggish" Colon

100% NON-INVASIVE - CLINICALLY PROVEN

The secret for a Perfect Body?
The Solution is

COMPRESSIVE MICRO-VIBRATION ENDOSPHERES THERAPY

Finally we have a new solution to eliminate cellulite: Compressive Micro-vibration / Endosphères Therapy is a revolutionary method that reshapes your body definitely after only a few sessions.

Compressive Micro-vibration / Endosphères Therapy is a machine that works on low frequency mechanical vibration that:

- drastically reduce "saddle bags" on outside of thighs
- drastically reduce orange peel skin
- eliminate excess liquids giving a sense of lightness to your legs

HOW IT WORKS

and liberates the cellulite tissues from excess liquids and facilitates the draining towards the lymphatic connectors and glands. This allows an immediate reduction and a re-oxygenation of the treated area.

3. Acts on Micro-Circulation

The mechanical vibration works on the micro-circulation, inducing an effect of vasoconstriction and vasodilation that results in an improvement blood circulation in the treated area.

4. Body Contouring

The rotation of the spheres allows the separation of the adipocytes

that are responsible for the fibrous tissue, that cause the "orange peel" skin effect; it reduces the beauty flaw after only a few sessions.

5. Muscle Toning

The vibrating stimulation, made on the muscle for an appropriate amount of time, allows to obtain an optimization of the muscle tone in the treated area.
